

Figure 1: A plot showing the relative bias of the R16/R24 ratio for different annealing phases. The y-axis represents the relative bias, ranging from 1.5 to 2.2. The x-axis lists the annealing phases: bef_ann, ann_75C_5h, ann_75C_25h, ann_100C_5h, ann_100C_25h, ann_125C_5h, ann_125C_25h, ann_150C_5h, and ann_150C_25h. The plot shows the mean relative bias (black dots) and the statistical uncertainty (black error bars) for each phase. A horizontal line at 1.9 indicates the systematic uncertainty (R16/R24). The relative bias is generally higher for the 5h phases compared to the 25h phases, and the uncertainty is larger for the 5h phases.

Figure 1: A plot showing the evolution of the effective number of degrees of freedom, g_{eff} , as a function of the logarithm of the renormalization scale, $\ln(\mu)$. The x-axis ranges from -10 to 10, and the y-axis ranges from 1.9 to 2.6. The plot shows a series of data points with error bars, representing the evolution of g_{eff} from a high scale ($\ln(\mu) = -10$) to a low scale ($\ln(\mu) = 10$). The data points are colored black and red, and the error bars are shown as vertical lines. A horizontal line at $g_{\text{eff}} = 2.45$ is labeled 'Systematic uncertainty (R16/R24)'. A horizontal line at $g_{\text{eff}} = 2.55$ is labeled 'Statistical uncertainty'. The data points show a general downward trend, with a significant drop around $\ln(\mu) = 0$, followed by a plateau around $g_{\text{eff}} = 2.0$.

Figure 3 is a plot showing the relative uncertainty of the fit parameters. The y-axis represents the relative uncertainty, ranging from 1.2 to 2.4. The x-axis lists the fit parameters: bef_ann, ann_75C_5h, ann_75C_25h, ann_100C_5h, ann_100C_25h, ann_125C_5h, ann_125C_25h, ann_150C_5h, and ann_150C_25h. Two horizontal lines indicate the uncertainty levels: 'Statistical uncertainty' (black line with error bars) and 'Systematic uncertainty (R16/R24)' (pink line). The statistical uncertainty is generally higher than the systematic uncertainty, with the largest relative uncertainty observed for the 'bef_ann' parameter.
