

Scatter plot showing the number of iterations (Y-axis, 1 to 7) versus the annealing phase (X-axis). The X-axis categories are: bef_ann, ann_75C_5h, ann_75C_25h, ann_100C_5h, ann_100C_25h, ann_125C_5h, ann_125C_25h, ann_150C_5h, and ann_150C_25h. The legend indicates two data series: Statistical uncertainty (black circles with error bars) and Systematic uncertainty (R16/R24) (pink squares).

Annealing Phase	Statistical uncertainty (Mean)	Statistical uncertainty (Min-Max)	Systematic uncertainty (R16/R24)
bef_ann	~6.8	~6.5 - 7.0	-
ann_75C_5h	-	-	-
ann_75C_25h	-	-	~2.0
ann_100C_5h	-	-	~2.2
ann_100C_25h	~1.8	~1.7 - 1.9	-
ann_125C_5h	~2.1	~2.0 - 2.2	-
ann_125C_25h	~1.8	~1.7 - 1.9	-
ann_150C_5h	-	-	-
ann_150C_25h	-	-	~3.0

Figure 1 is a plot showing the number of reads (N) versus annealing phase. The y-axis represents the number of reads (N) from 0 to 7. The x-axis represents the annealing phase with categories: bef_ann, ann_75C_5h, ann_75C_25h, ann_100C_5h, ann_100C_25h, ann_125C_5h, ann_125C_25h, ann_150C_5h, and ann_150C_25h. Two data series are plotted: Statistical uncertainty (black error bars) and Systematic uncertainty (R16/R24) (pink error bars). The 'bef_ann' category shows the highest number of reads, around 6.5. The 'ann_100C_5h' category shows a significant drop in reads, around 3.5. The 'ann_125C_5h' category shows the lowest number of reads, around 2.0.

Annealing Phase	Statistical Uncertainty (N)	Systematic Uncertainty (N)
bef_ann	~6.5	~6.5
ann_75C_5h	~2.5	~2.5
ann_75C_25h	~2.8	~2.8
ann_100C_5h	~3.5	~3.5
ann_100C_25h	~2.5	~2.5
ann_125C_5h	~2.0	~2.0
ann_125C_25h	~0.5	~0.5
ann_150C_5h	~0.5	~0.5
ann_150C_25h	~0.5	~0.5

Figure 1 is a plot showing the relative uncertainty of the R16/R24 ratio for different annealing phases. The y-axis represents the relative uncertainty (0 to 6). The x-axis lists the annealing phases: bef_ann, ann_75C_5h, ann_75C_25h, ann_100C_5h, ann_100C_25h, ann_125C_5h, ann_125C_25h, ann_150C_5h, and ann_150C_25h. Two data series are shown: Statistical uncertainty (black error bars) and Systematic uncertainty (R16/R24) (pink error bars). The plot shows that the relative uncertainty is highest for the 'bef_ann' phase and decreases as the annealing phase progresses, with the 'ann_150C_25h' phase showing the lowest uncertainty.

Figure 3 is a plot showing the relative difference in the number of detected events between the two channels. The y-axis is labeled 'B' and ranges from 0 to 5. The x-axis shows various annealing phases: bef_ann, ann_75C_5h, ann_75C_25h, ann_100C_5h, ann_100C_25h, ann_125C_5h, ann_125C_25h, ann_150C_5h, and ann_150C_25h. Two data series are shown: 'Statistical uncertainty' (black error bars) and 'Systematic uncertainty (R16/R24)' (pink error bars). The plot shows that the relative difference is highest for the 'bef_ann' phase and decreases as the annealing phase progresses.
