

Figure 1 is a scatter plot showing the number of reads per cell for various genes. The y-axis is labeled 'B' and ranges from 1 to 7. The x-axis lists genes: bet_ann, ann_75C_5h, ann_75C_25h, ann_100C_5h, ann_100C_25h, ann_125C_5h, ann_125C_25h, ann_150C_5h, and ann_150C_25h. Two data series are shown: 'Statistical uncertainty' (black crosses) and 'Systematic uncertainty (R16/R24)' (purple squares). The 'Statistical uncertainty' series shows a wide range of values, while the 'Systematic uncertainty' series shows a much narrower range of values, mostly between 1 and 3.

Figure 10 is a plot showing the relative uncertainty of the fit parameters. The y-axis is labeled 'B' and ranges from 1 to 6. The x-axis lists parameters: bet_ann, ann_75C_5h, ann_75C_25h, ann_100C_5h, ann_100C_25h, ann_125C_5h, ann_125C_25h, ann_150C_5h, and ann_150C_25h. For each parameter, a vertical error bar is shown. The error bars for bet_ann and ann_100C_5h are significantly larger than the others. A legend indicates that the black error bars represent 'Statistical uncertainty' and the purple error bars represent 'Systematic uncertainty (R16/R24)'.

Figure 2 is a plot showing the relative uncertainty of the estimated parameters. The y-axis is labeled 'B' and ranges from 0 to 6. The x-axis shows various parameters: bet_ann, ann_75C_5h, ann_75C_25h, ann_100C_5h, ann_100C_25h, ann_125C_5h, ann_125C_25h, ann_150C_5h, and ann_150C_25h. The plot includes two data series: 'Statistical uncertainty' represented by black crosses and 'Systematic uncertainty (R16/R24)' represented by purple horizontal bars. The statistical uncertainty is generally higher than the systematic uncertainty, especially for the ann_150C_5h and ann_150C_25h parameters.

Figure 2 is a plot showing the evolution of the effective number of clusters, N_{eff} , as a function of the annealing phase. The y-axis represents N_{eff} , ranging from 2.1 to 2.9. The x-axis shows different annealing phases: bef_ann, ann_75C_5h, ann_75C_25h, ann_100C_5h, ann_100C_25h, ann_125C_5h, ann_125C_25h, ann_150C_5h, and ann_150C_25h. For each phase, a vertical black line with a central black dot indicates the statistical uncertainty, and a horizontal purple line indicates the systematic uncertainty (R16/R24). The N_{eff} values generally decrease from approximately 2.65 at bef_ann to around 2.25 at ann_150C_25h.
