

Figure 1 is a scatter plot showing the number of reads per cell for various genes. The y-axis is labeled 'B' and ranges from 1 to 7. The x-axis lists genes: bet_ann, ann_75C_5h, ann_75C_25h, ann_100C_5h, ann_100C_25h, ann_125C_5h, ann_125C_25h, ann_150C_5h, and ann_150C_25h. Two data series are shown: 'Statistical uncertainty' (black crosses) and 'Systematic uncertainty (R16/R24)' (purple squares). The 'Statistical uncertainty' series shows a wide range of values, while the 'Systematic uncertainty' series shows a much narrower range of values, mostly between 1.5 and 2.5.

Gene	Statistical uncertainty (B)	Systematic uncertainty (R16/R24) (B)
bet_ann	~6.8	~5.8
ann_75C_5h	~5.8	~5.8
ann_75C_25h	~2.0	~1.9
ann_100C_5h	~2.2	~2.2
ann_100C_25h	~1.8	~1.8
ann_125C_5h	~2.2	~2.2
ann_125C_25h	~1.8	~1.8
ann_150C_5h	~1.8	~1.8
ann_150C_25h	~3.0	~2.9

Figure 2 is a plot showing the evolution of the effective number of clusters, N_{eff} , as a function of the annealing phase. The y-axis represents N_{eff} , ranging from 2.1 to 2.9. The x-axis shows the annealing phase with labels: bef_ann, ann_75C_5h, ann_75C_25h, ann_100C_5h, ann_100C_25h, ann_125C_5h, ann_125C_25h, ann_150C_5h, and ann_150C_25h. Data points are shown as black circles with vertical error bars. A legend indicates that the black error bars represent 'Statistical uncertainty' and the purple error bars represent 'Systematic uncertainty (R16/R24)'. The N_{eff} values generally decrease as the annealing phase progresses, starting around 2.65 and ending around 2.15.
